

The Industry's first end-to-end **Active RFID Solution** For real-time container tracking.

Supply Chain Visibility

You can't optimize what you can't see. Our new end-to-end container tracking system eliminates the "black hole" in intermodal transportation through intelligent use of radio frequency identification (RFID) technology. For the first time, you can see with your own eyes how to reduce inefficiency and excess inventory while creating competitive advantage.

Visibility Challenge #1:

I need to know exactly where my cargo is and when it will be delivered so I can schedule my workforce and reduce wasted hours.

Solved. Our RFID tracking events have been integrated into our industry-leading logistics management tool NetCaptain® so you can customize alerts for shipment status and delivery notifications. As a delivery nears your facility, we e-mail you before it arrives with a time-definite delivery window. You plan workforce requirements and improve productivity in your receiving operation. We demonstrate a commitment to your logistics success.

Visibility Challenge #2:

Once my shipment is delivered, I don't want to pay demurrage on equipment that I don't even know I have.

Solved. We can install RFID readers at your facilities, stores and yards. Our containers talk to the network, telling customer service and your managers when equipment is reaching detention and demurrage free-time limits. You customize alert notification via NetCaptain® to have e-mails forwarded to the appropriate parties for timely action.
